

INFORMATION TECHNOLOGY, INTERNET AND E-COMMERCE

All businesses today depend on technology to help them deliver their products and services more efficiently, often through cloud-based or other Internet or e-commerce mechanisms. Our experience representing both vendors and customers makes us uniquely qualified to understand the complex issues arising in connection with these business critical relationships. Henson Efron attorneys represent purchasers and vendors of software and information technology products.

We also assist organizations in dealing with technology vendors to help protect their interests when licensing technology or software, or purchasing technology support and maintenance needed in business. Our lawyers can help minimize risk and obtain favorable terms in buying, selling and licensing transactions.
